Towards gravitational-wave astronomy

Parameswaran Ajith

**International Centre for Theoretical Sciences, Tata Institute of Fundamental Research, Bangalore,
India**

With the advent of the second-generation of interferometric gravitational-wave observatories that have recently started their data-taking runs, the first direct detection of gravitational waves is anticipated in the near future. Focusing on the theoretical and computational challenges, this talk will try to give an overview of the efforts underway for the first detection as well as for the subsequent exploration of the Universe using this new window of astronomy.
